INFORMATION DISCLOSURE STATEMENT
USSN 09/293,509;RM.HPN

One known approach to maintaining player interest in playing the gaming machine is to provide a further game on the same gaming machine, the further game being different from the primary game and displayed on another display device. One example of this arrangement is described in Japanese Patent Application Kokai (Laid-Open) No. 61-113488 which discloses a slot bingo game machine wherein numeral displays of the slot game are used as selection numbers of a "bingo game." In this manner, the intensity added by the bingo game played enhances the slot game.

In this known arrangement, however, the slot game is used as a mere additional function to the bingo game in the gaming machine disclosed in the above reference, and therefore, the problem of eventual monotony with the gaming machine is not overcome. In addition, the display of the bingo game is fixed and less variable than that of the slot game. Moreover, variation in the display of the bingo game occurs only when the predetermined symbols become aligned on a predetermined line of the variable portion of the principal display. Therefore, the maintenance of player interest in the gaming machine has not been improved by the known arrangement.
